**Purpose:** This course is designed to develop student's ability to *model* and *analyze* real systems using *discrete event simulation*. Through this course, the student will understand the power and characteristics of discrete event simulation modeling. During the course, the student will get experience in: (1) formulating an appropriate simulation model for a system, (2) implementing the model as a computer program, and (3) evaluating the output of the model.

**Textbook:** *Simulation with Arena*, W. David Kelton, et al, 6<sup>th</sup> edition, McGraw-Hill, Boston, MA, 2014

**Textbook site:** Book examples and Arena software can be downloaded from [www.mhhe.com/kelton](http://www.mhhe.com/kelton)

**Topics to be covered:**

1. Basic concepts of simulation (definitions and types of simulations)
2. Mechanism of discrete event simulation
3. Random number generation
4. Input data analysis (input distribution modeling)
5. Simulation modeling using Arena package
6. Review of probability and statistics
7. Simulation output analysis
8. Monte Carlo simulation
9. Verification and validation of simulation models
10. Other simulation approaches (Time driven simulations).
